NAME

m2h - (musescore2html) generate html-files from a musescore score

SYNOPSIS

m2h [**-gui** | **-cli**] [**-C** *'configuration-file'*] [**-l** *'language'*] [**-m** *'musescore'*] [**-o** *'output-directory'*] [**-i** *'index-filename'* | **-I** *'index-filename'*] [**-p** | **-n** | **-r**] [**-v** | **-q** | **-s**] [**-c**] [score ...]

DESCRIPTION

The musescore2html utility is used to generate files from a musescore score to show it as a html-file.

Options:

-gui   Use graphical user interface (default).

-cli   Use commandline interface.

-C *'configuration-file'*
        Read configuration from 'configuration-file'.

-l *language*
        Specify the language to be used.
         Overrules the language specified in 'configuration-file' (if used).

-m *'mscore'*
        Location of MuseScore executable.

-o *'output-directory'*
        Specify where to place files generated.
         Defaukt:

                Commandline interface: the current directory.

                Graphical user interface: user-directory.

Except if option -I 'index-filename' is used, a html-file for every score will be generated.

-i *'index-filename'*

> Create an indexfile with name 'index-filename' in directory 'output-directory' with a link to the generated html-files for the scores.

-I *'index-filename'*

> Create an indexfile with name 'index-filename' in directory 'output-directory' with a link to the html-file 'ShowScore.html' to show the scores.
> A html-file for each score will NOT be generated, only the other files to show a score (with 'ShowScore.html').

-p   Preserve existing files (default).

-n   Overwrite existing files only if score is newer than existing files to be generated.

-r   Replace existing files.

In case of commandline usage :

> Information about processing defaults to information about files generated/installed/replaced/skipped and will be send to standard output.

> Information about errors will be send as diagnostic messages to standard error.

Default is 'normal' information.
 Options [**-v** | **-q** | **-s**] can be used to change the amount of information.

-v   Verbose, show extensive information about processing files.

-q   Quiet, don't show detailed information about processing files.
             Only a summary will be displayed.

-s   Silent, (utterly silent) don't show any information about processing files, even error messages.

-c   Check only, dry run which shows what should have happened.

CONTEXT

Java 8+ should be installed.
 Musescore should be installed (see https://musescore.org).

IMPLEMENTATION NOTES

Uses :

Xerces2 Java 2.12.1 (http://xerces.apache.org/xerces2-j/)

Saxon-EE 10 (http://saxon.sourceforge.net)

Apache Ant 1.10.9 (https://ant.apache.org)

RETURN VALUES
FILES

For each score 'MyScore.mscz' (or 'MyScore.mscx') it will create files

MyScore.metajson

MyScore_space.json

MyScore-1.png

MyScore-2.png

MyScore.ogg

MyScore.mp3
If
is not used:

MyScore.html
will be generated.

Creates subdirectories:

js,

css

images
and installs javascript, css-stylesheet en svg-images

js/ms_player.js

css/ms_player.css

images/media-playback-loop.svg

images/media-playback-metronome.svg

images/media-playback-pause.svg

images/media-playback-start.svg

images/media-skip-backward.svg

images/media-skip-forward.svg

images/window-close.svg

If
is used:

js/ms_player_query.js

ShowScore.html
wille be installed.

EXIT STATUS
    If an error occurs return code will be non-zero.

EXAMPLES
    To generate html-files for all scores in directory MyMusic and place then in directory Sites :

    m2h -d Sites MyMusic/*.mscz
    To generate html-files for all scores in directory MyMusic and all subdirectories and place then in

directory Sites :

m2h -d Sites MyMusic/**/*.mscz
